

LADDER RUNG COVERS

ULTIMATE SAFETY

NO LAYERING • NO BONDING • NO SURFACE GRIT COATINGS

TRAX Anti-Slip Ladder Rung Covers feature a gritted surface that provides superior grip for hands or feet, no matter the conditions. With a larger surface area than bare rungs, these covers increase the contact area to make ascending and descending safer than ever. Available for both round and square rung designs, TRAX Ladder Rung Covers provide an easy and simple solution to eliminate the risk of slipping when using ladders.

- 100% Composite Material
- Unequalled Product Guarantee
- Extreme Durability

LADDER RUNG COVERS

SUPERIOR QUALITY AND DURABILITY

TRAX Ladder Rung Covers are manufactured entirely by hand in a unique multi-step fabrication process, then trimmed and cut to size. By incorporating the separate elements into one seamless fiberglass composite material, we build the strongest and most durable product available on today's market.

GLOW-IN-THE-DARK

A fully embedded, photoluminescent strip can be included on all TRAX products to provide glow-in-the-dark capability and critical visibility of emergency evacuation and egress pathways in any facility.

SIZES AVAILABLE

LENGTH (A)

TRAX Ladder Rung Covers come in standard off-the-shelf lengths that will fit most applications, however special lengths can be produced upon request. The required "length" of the ladder rung cover is generally up to 2" (50 mm) shorter than the length of the actual ladder rung. This is to ensure that there is no obstruction (e.g., a weld bead) that may interfere with the seating of the rung cover.

WIDTH (B)

The required "width" of the TRAX Ladder Rung Cover is the internal dimension between the two drops or "legs" of the rung cover. The internal width of a ladder rung cover should be 1/16–1/8" (2–3mm) greater than the outside diameter of the actual ladder rung. This allows for a cushion layer of adhesive to sit between the ladder rung and the ladder rung cover.

MAINTENANCE AND SAFETY

TRAX Step Covers provide both a smart look and reliable anti-slip protection, requiring minimal maintenance to keep them in top condition. Basic cleaning can be accomplished with steam or water along with mild detergents, citrus cleaners, "green" solutions—just avoid strong solvents. For more stubborn soilage and snow or ice buildup use synthetic brushes/brooms; shovels made of plastic or composite should be used for heavier deposits. Do not use steel shovels and scrapers, or wire brushes and brooms.

COLORS

TRAX anti-slip covers are available in a variety of colors:

Safety Yellow, Black

Specialty colors: Red, White, Blue, Green, Gray

*Color matching to RAL classic color system is available on request.

GRADES

TRAX anti-slip covers come in four grit sizes to suit any application:

FINE

Commercial buildings, swimming pools

INDUSTRIAL

For most industrial applications

OFFSHORE

Oil platforms, heavily soiled areas

EXTREME

Heavy snow and other extreme applications

INSTALLATIONS

TRAX Ladder Rung Covers are permanently affixed to existing ladder rungs with a cushion layer of powerful elasticized adhesive. The adhesive is dispensed from tubes using a common mastic gun:

Recommended adhesives include:

- Sikaflex 252
- Sika 11FC
- Soudal T-Rex

FRP Half Round Rung Cover

FRP Square Rung Cover
